between the
features.**

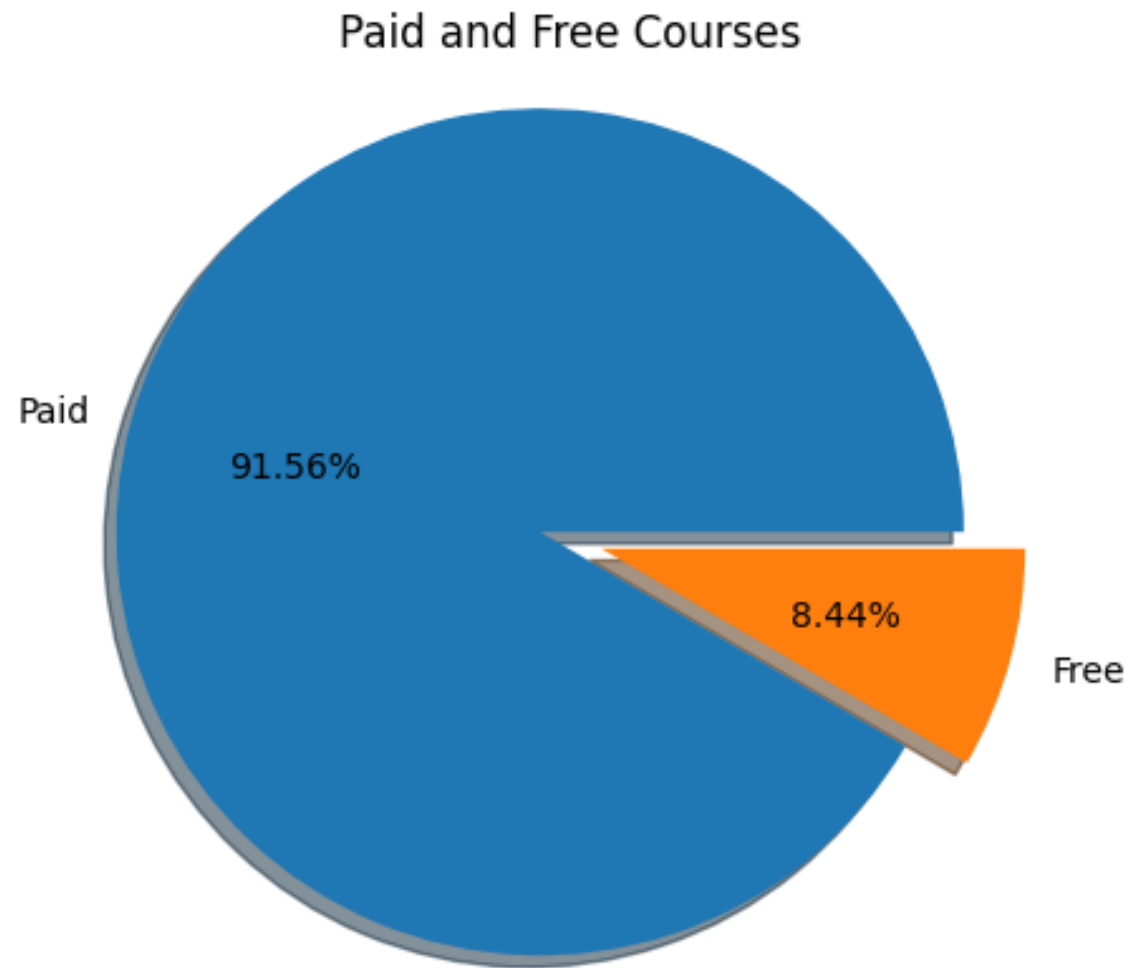

The coloration between the features.

We can conclude from the Heat Map that 'num subscribers' column has a negative coloration with is paid which mean that free courses have more subscribers than paid ones. we can also see that 'price' has a positive coloration with 'num lectures. Gemini rses.csv Number of Paid and Free courses

Number of courses in each subject

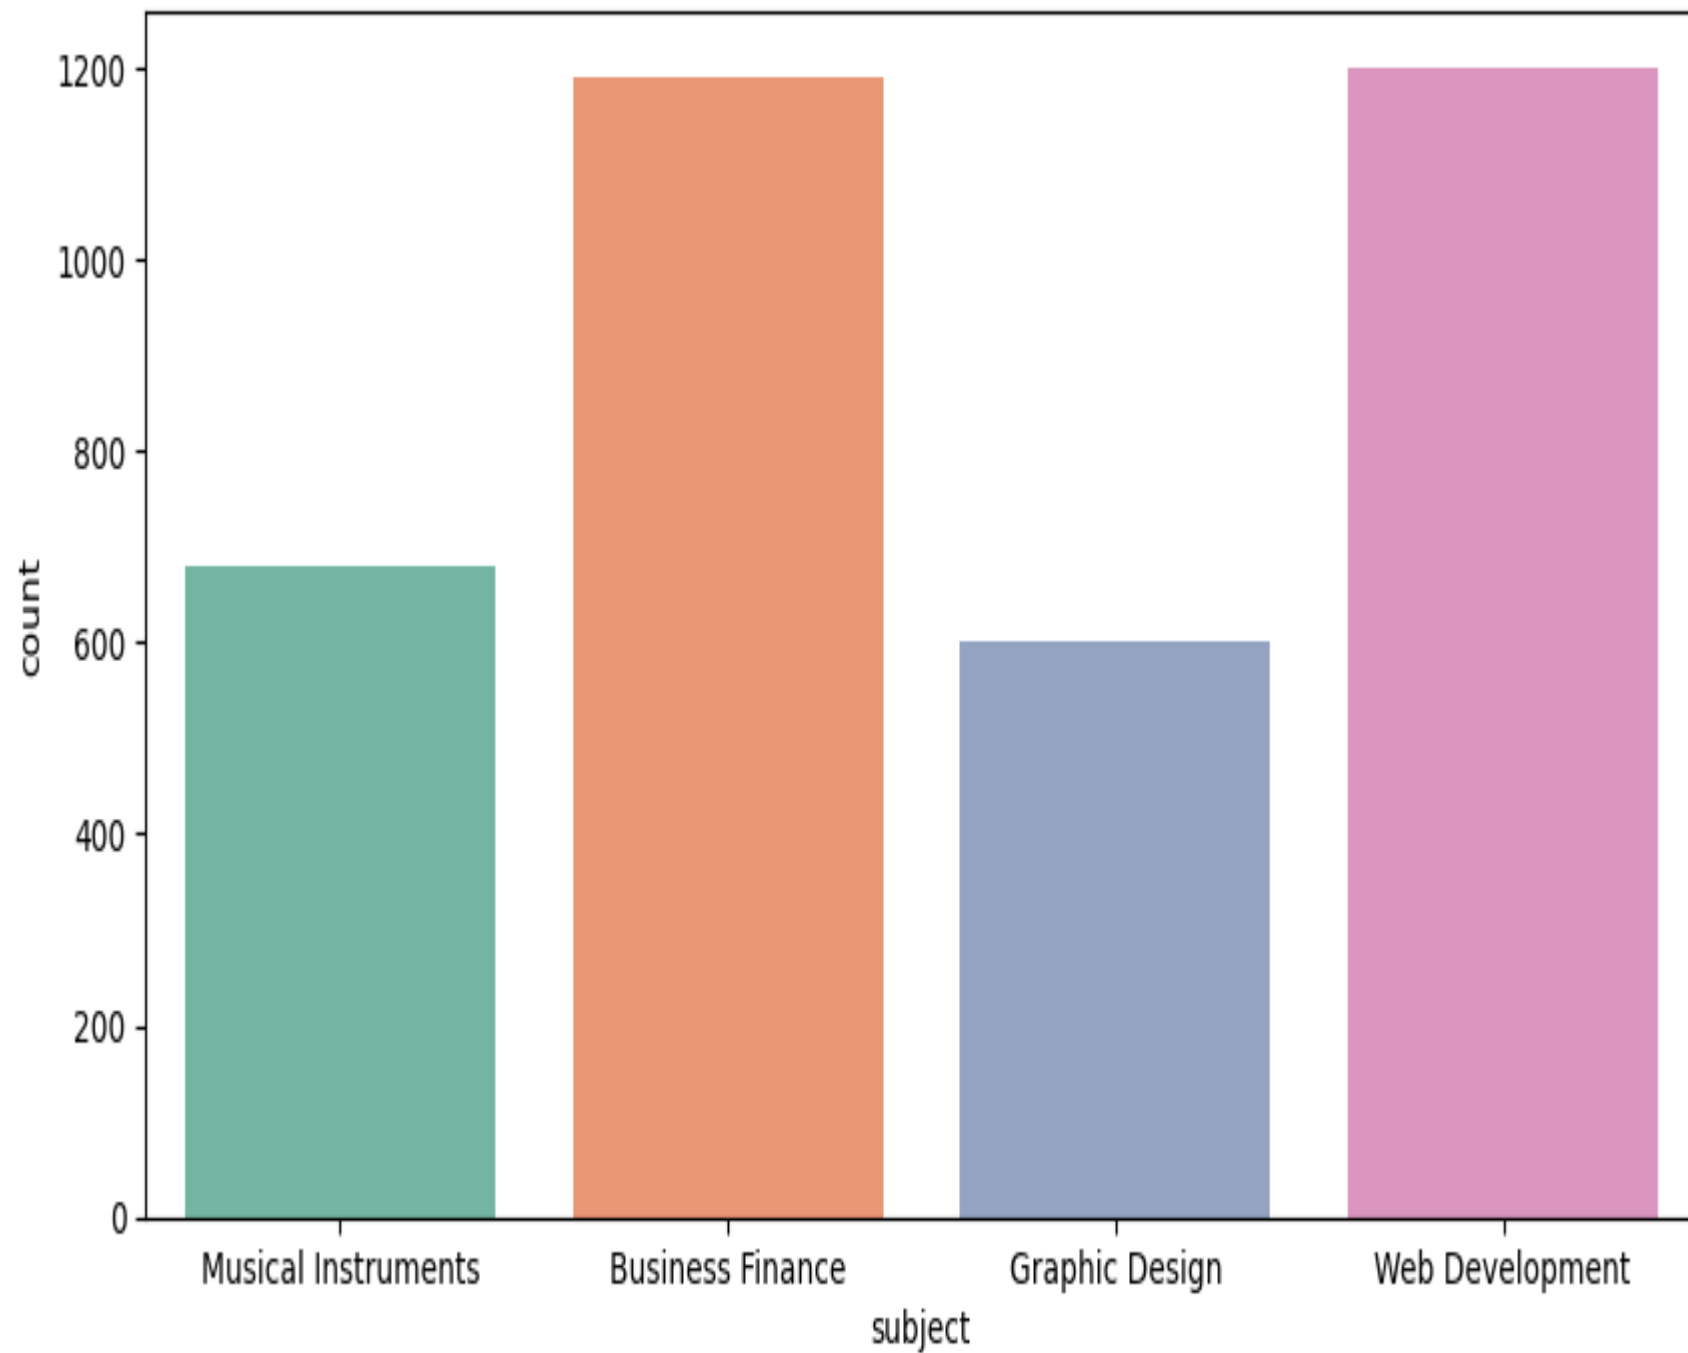

Number of courses in each subject

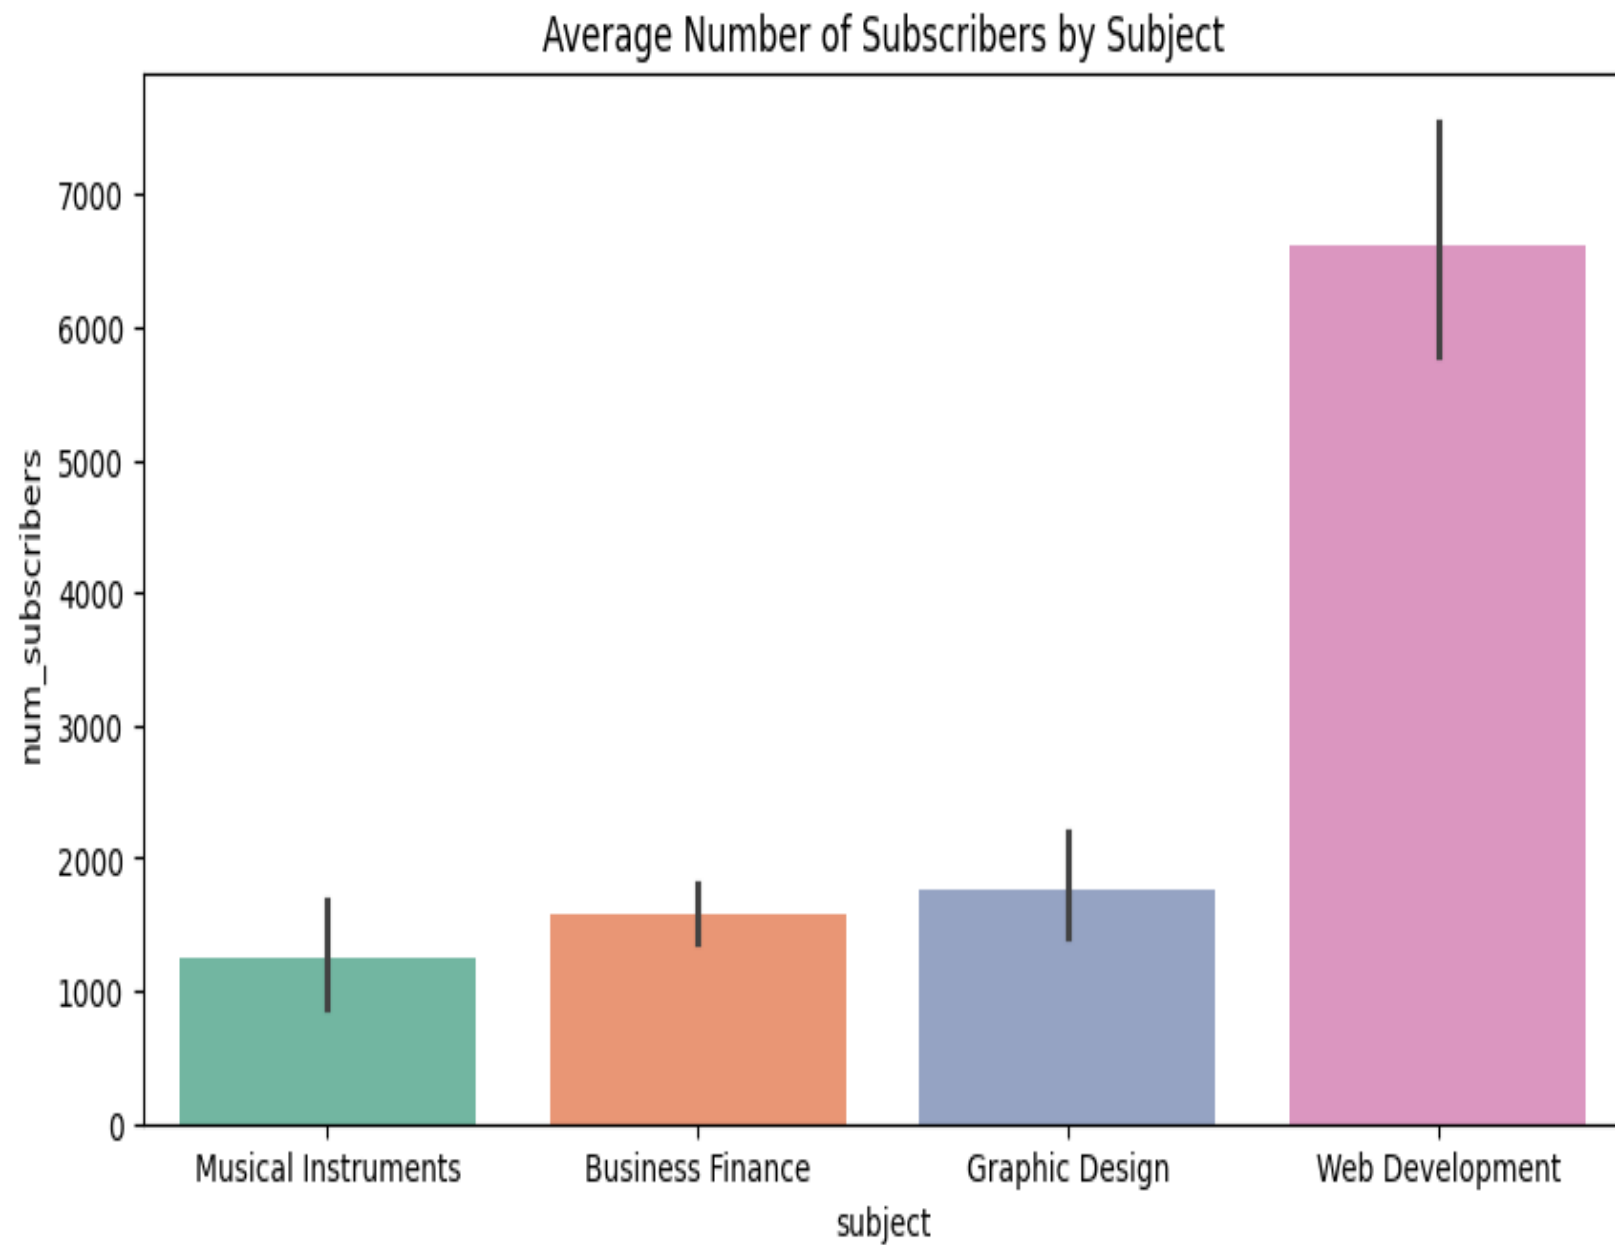

**Number of
courses in
each subject**

Web Development and Business Finance have the bigger number of courses and they are almost equal.

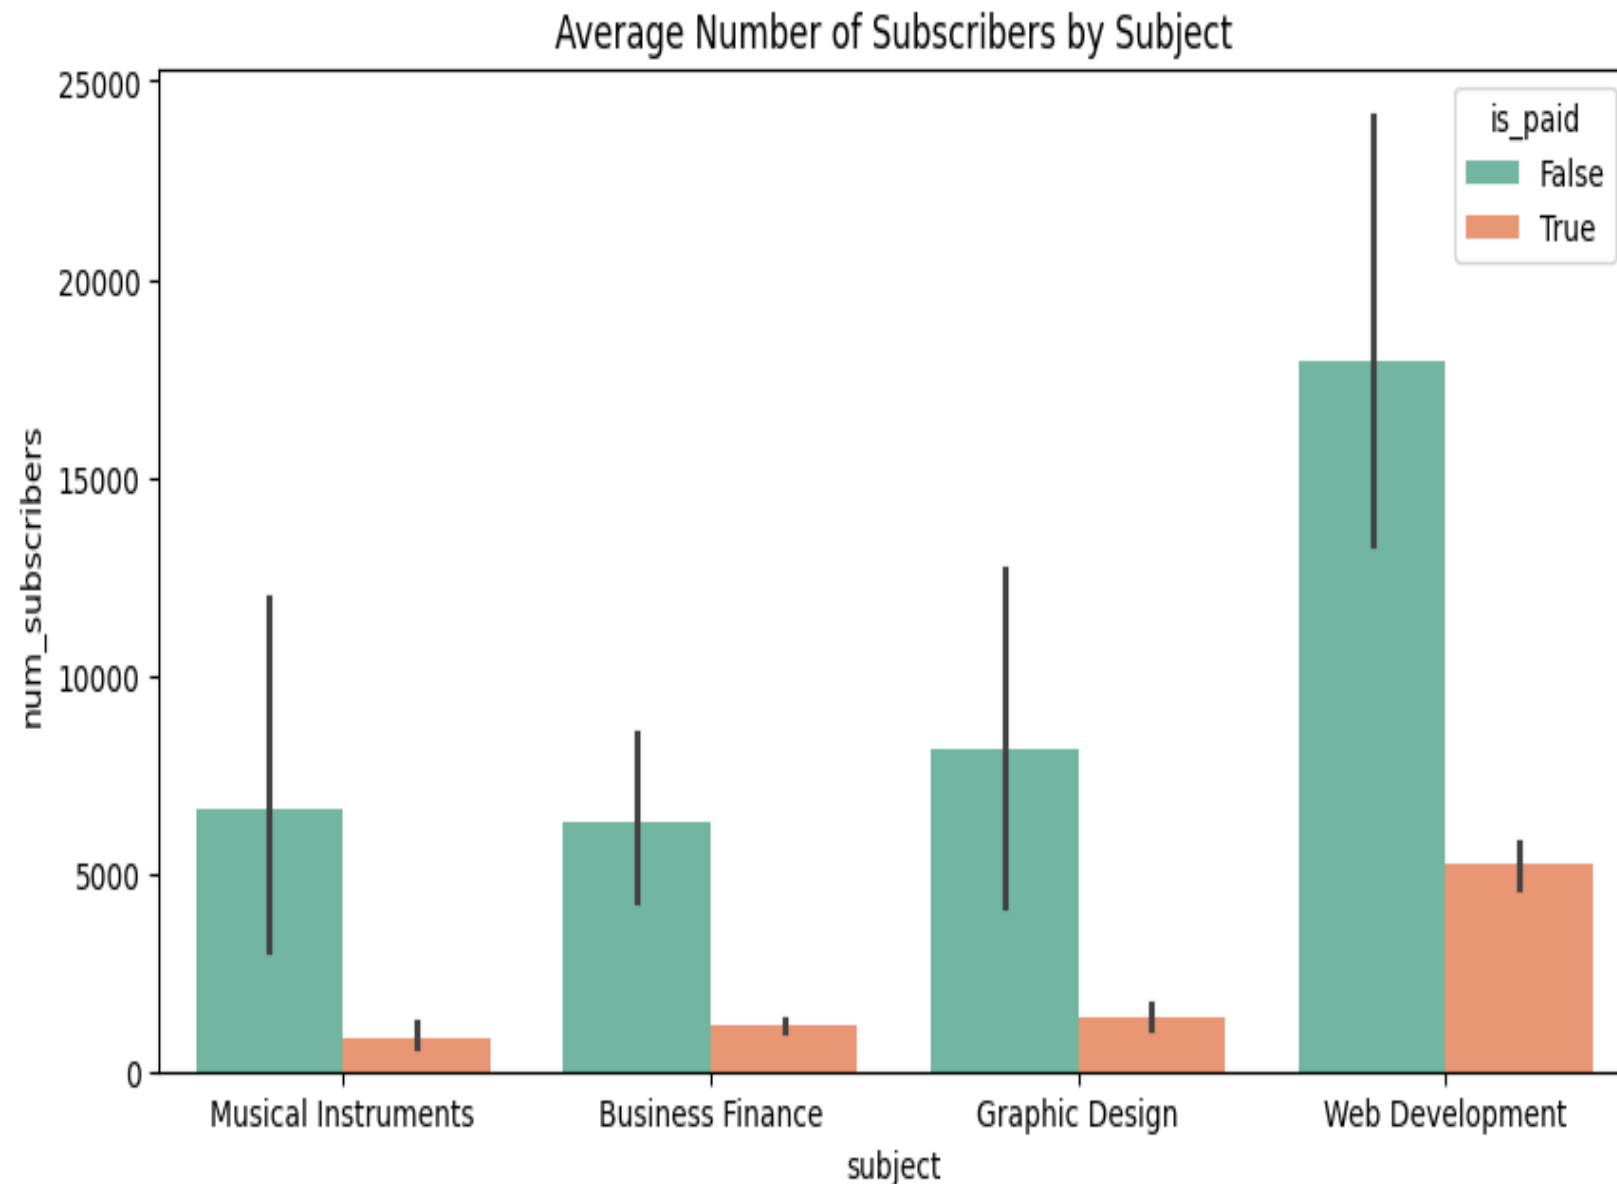

**Number of
courses in
each subject**

Average Number of Subscribers by Subject

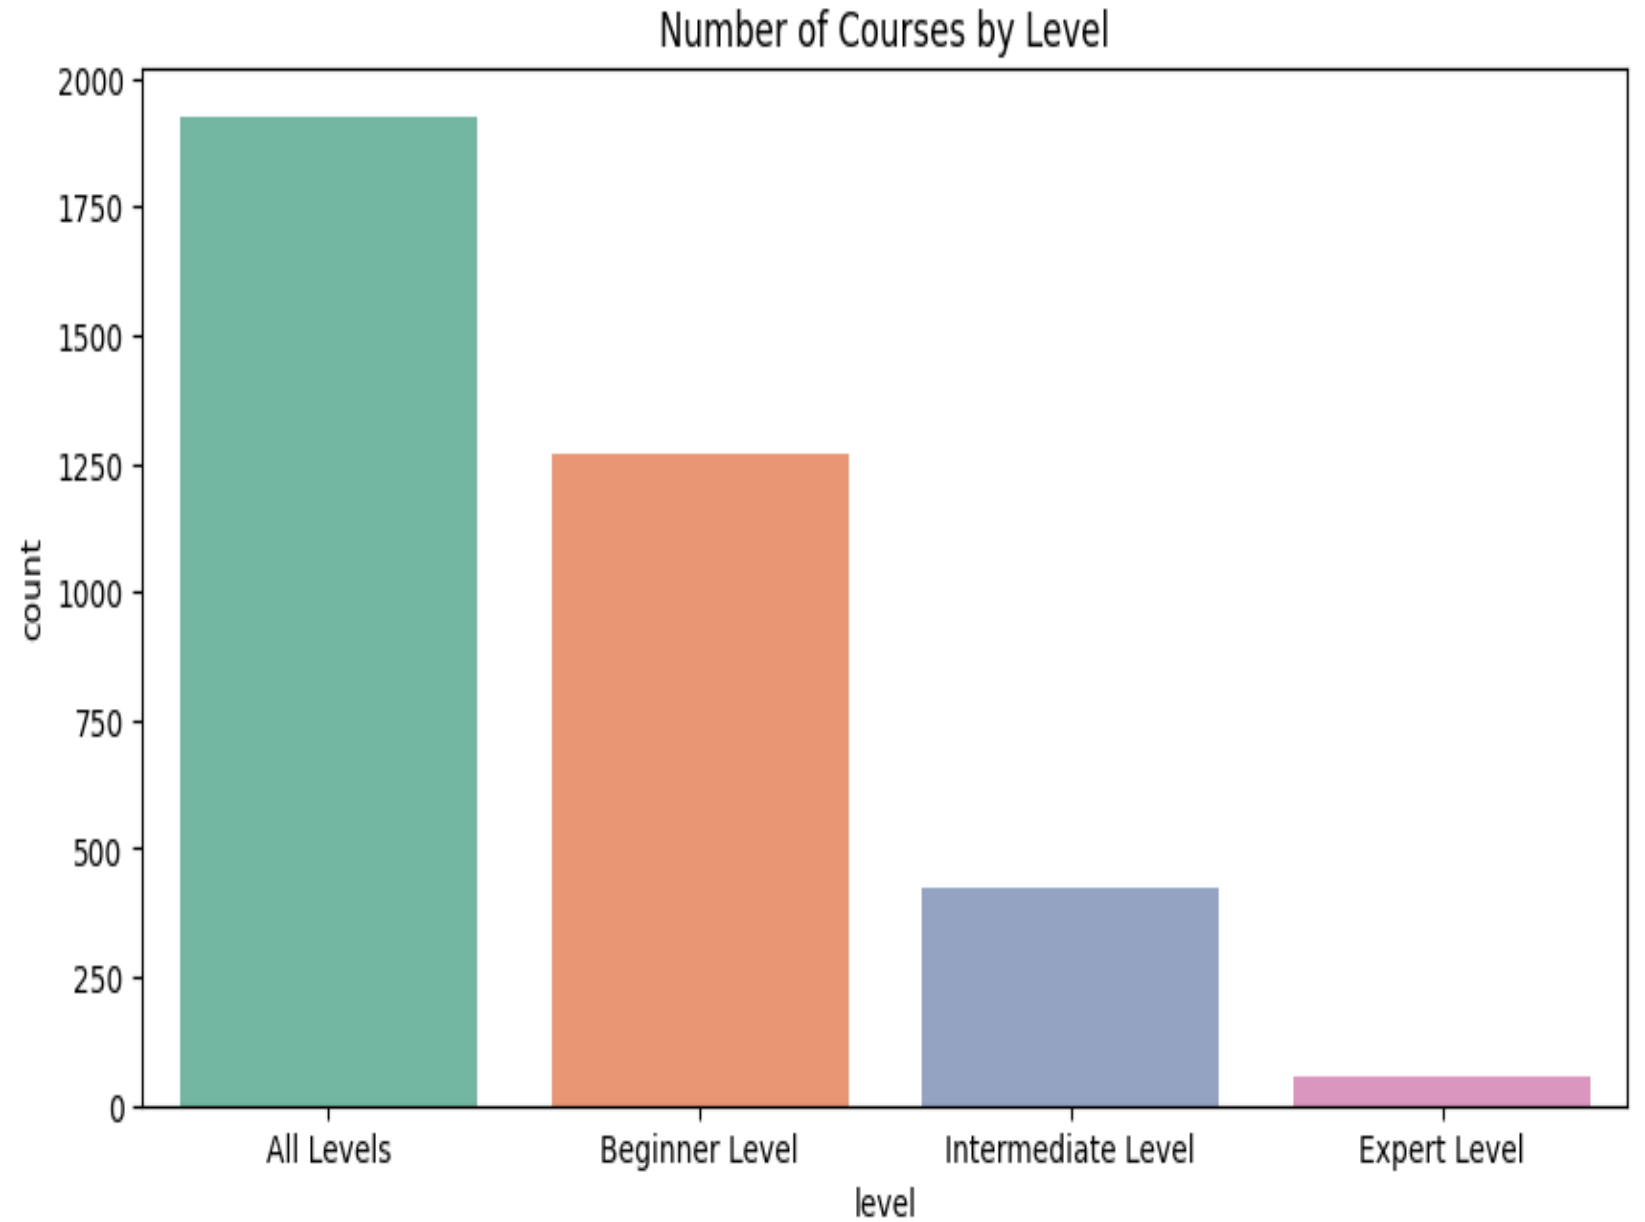

**subject has
the max
number of
Subscribe
with is paid**

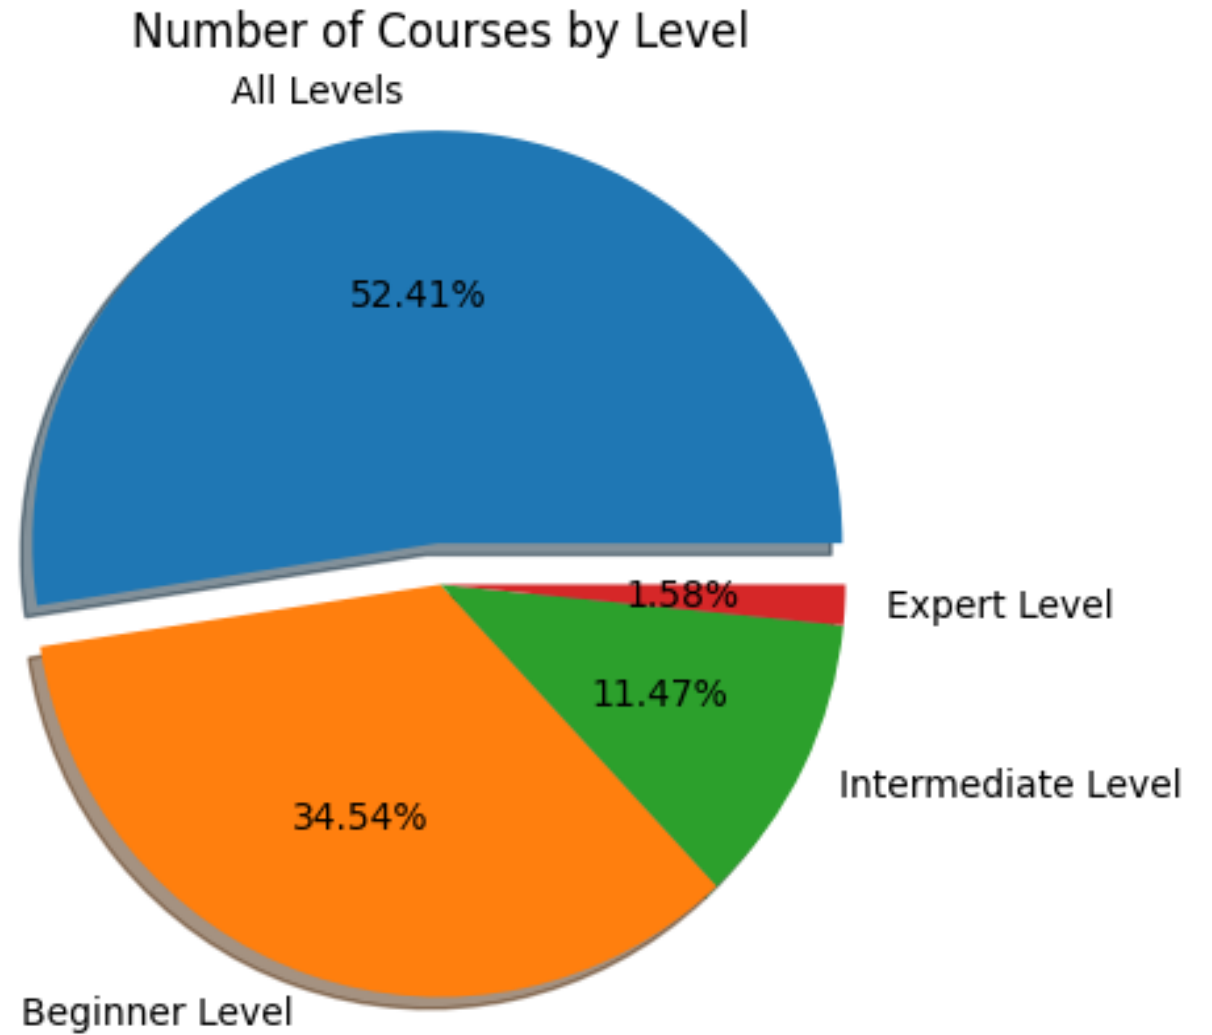

**Subject has the max
number of Subscribe
with is paid**

It is obvious that web development and Free courses are the most popular to the subscribers.

Number of Courses by Level

Number of Courses by Level

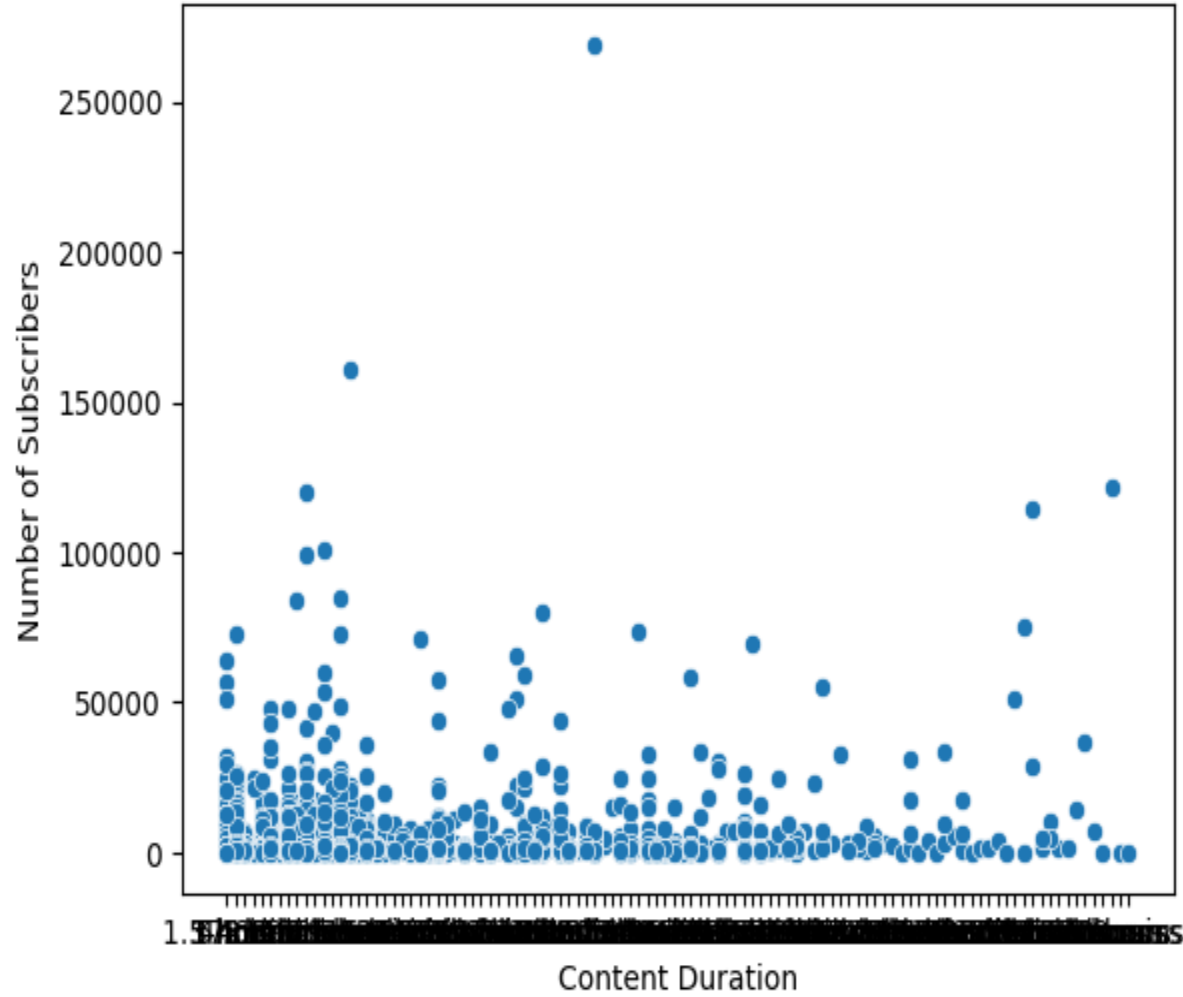

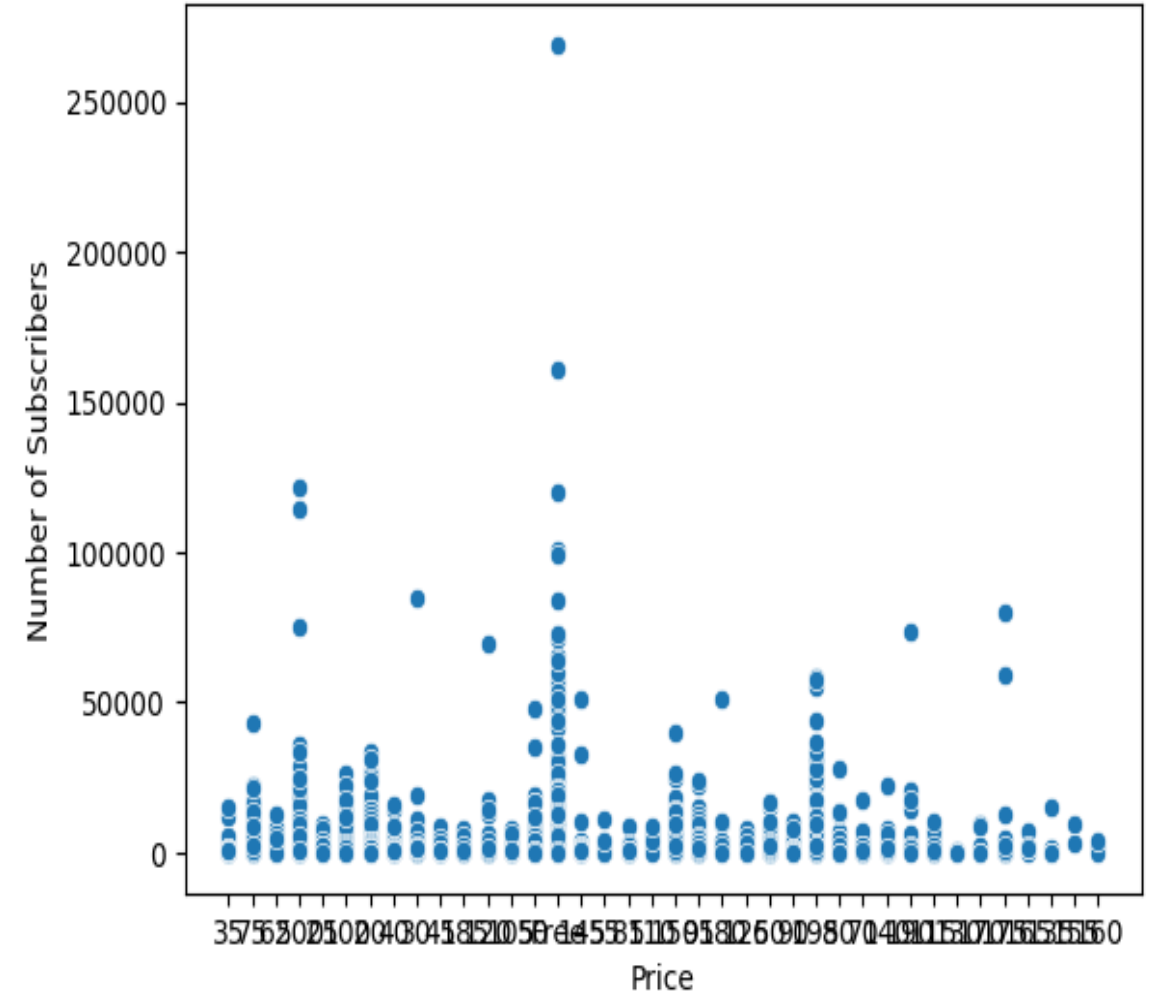

Number of Courses by Level

We can conclude that the bigger number of courses are in all levels and only few courses are in expert level.

Relation Between Number of Subscribers and Content Duration

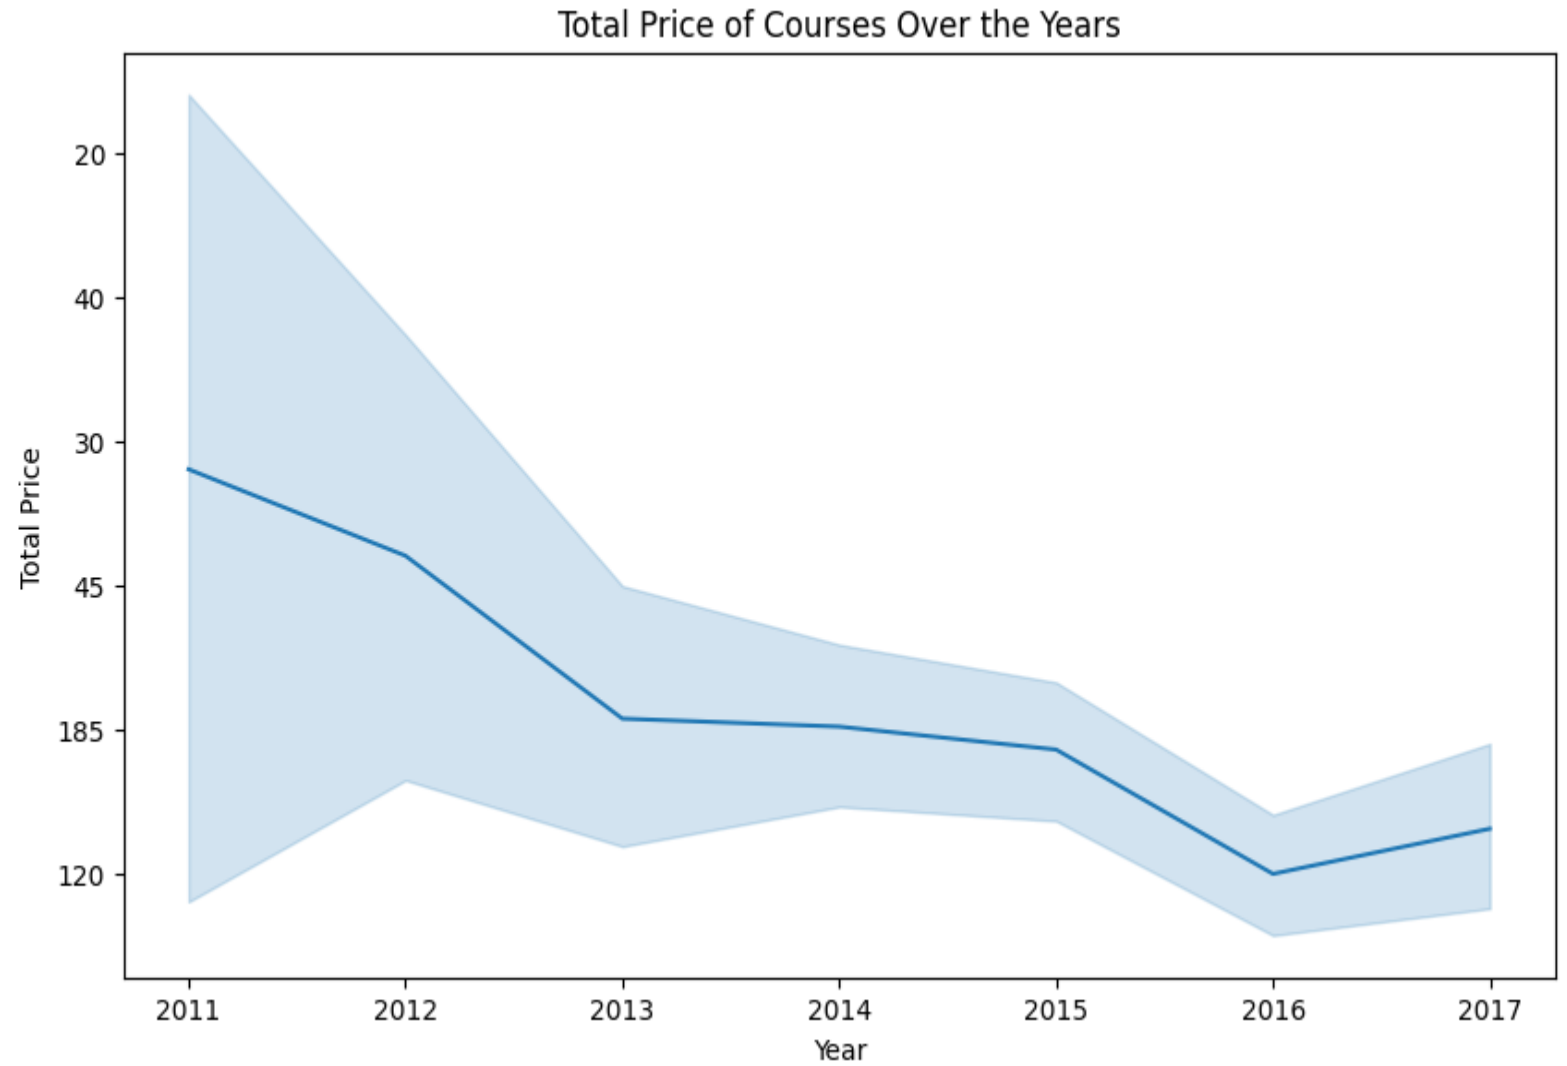

Relation Between Price and Number of Subscribers

Relation Between Price and Number of courses Subscribes

Plots with the number of lectures and content duration show that most popular courses are shorter, and have fewer number of content hours

Total Price of Courses Over the Years

The most 5 courses the have high subscribed
